

## WHY DID VINCI CHOOSE PRO-SAPIEN?

VINCI Construction UK is a national construction and facilities company, part of VINCI, a world leader in construction and civil engineering.

At local level VINCI regional teams operate throughout the UK, offering a fully-integrated service – from inception, ground investigation and remediation, through to project completion and beyond, to the delivery of operational solutions.

**H**ealth and safety is an area where VINCI is committed to continuous improvement. Through the rigorous management of operations, they help to ensure that their people return home safely and that those visiting or living near their sites are not at risk. Part of their continuous improvement strategy was to implement an EHS and Quality solution across their regional teams.

VINCI needed a system that would fully address the needs of their HSE department's operational and regulatory processes whilst integrating tightly with their Microsoft Office and SharePoint platforms that were implemented in 2013. After investing in Microsoft technologies, it was vital their new EHS solution could make good use of the existing IT infrastructure.

**“Pro-Sapien's understanding of the technology is second to none, which means that they came up with elegant, pragmatic solutions to our business requirements.**

The data warehouse that underpins Pro-Sapien's software enables the HSE team to drill down into the data captured within the system and provide tailored views of the data.”

*Nigel Lassman  
Project Manager*

“ Specific views of the data have been created based on the audience type which is all driven centrally from our Active Directory, and Pro-Sapien’s software is seamlessly integrated with our intranet.

We were keen to implement SharePoint 2013 and Pro-Sapien were able to tie in their 2013 software release with our timescales, supplying us with a solution that makes clever use of the underlying features of SharePoint and closely integrates into Microsoft Office. Together we achieved the objectives of the project as well as aiding user adoption and showcasing the platform.”

*Ben Paddick*  
IT Director

VINCI chose Pro-Sapien because our solution integrates seamlessly with and is built on Microsoft technologies. Furthermore, our user-friendly solution is completely flexible, with the ability to create tailored reports and dashboards.

“ The fact that Pro-Sapien’s solution is flexible and can incorporate change as our requirements advance over time was core to our decision.

Pro-Sapien’s experience and technical expertise, combined with their software, delivered an HSEQ portal that met our expectations. As a result we have a robust solution that has removed bureaucracy for end-users, is fit for purpose and tightly integrates with our Microsoft Office and SharePoint environment.”

*Andy Sneddon*  
Group Health and Safety Director

According to Commercial Director of Pro-Sapien, Murray Ferguson:

“ By investing in Pro-Sapien’s software, organizations like VINCI see major productivity and compliance management benefits that enable greater transparency, all of which assist when fulfilling regulatory requirements and internal quality standards. In this project, we implemented mobile forms that can be filled in anonymously by site workers and the public alike to report near misses and non-conformance.”

By scanning QR codes on the VINCI site perimeter hoardings, an individual can fill in a form to highlight areas of concern to the HSE team. As the forms are browser based, any device including tablets and smartphones can be used.

VINCI’s strategic approach to their EHS and Quality management demonstrates the bold and progressive commitment they have for the safety of their employees, contractors, and the general public.

## Innovation Award

VINCI are so impressed with their EHS and Quality software from Pro-Sapien that they presented our Mobile Forms technology for an industry innovation award, resulting in our technology receiving the **Special Jury Prize** within its category. In 2014 the mobile app was rolled out across all VINCI Construction UK divisions. Two main benefits were identified:

- » **HSE Officers can intervene in reported incidents immediately.**
- » **The company can identify potentially dangerous recurring situations and revise its prevention strategy accordingly.**

Since implementation, Pro-Sapien's Mobile Forms have facilitated VINCI to record the equivalent of ten incidents a week, including dangerous situations and near misses. Deploying a mobile application allows organizations like VINCI to sharply accelerate the reporting of information, whilst Pro-Sapien's mobile forms also allow the attachment of photos to assist the analysis process.

“There were some tight deadlines, but Pro-Sapien and my colleagues in IT ensured the timely and effective launch. The new system will improve environmental reporting significantly.

I had a clear view of how we wanted the environmental system to work and it was relatively straight forward, through the use of workshops, to provide Pro-Sapien with the material they needed. It was great to see the collaboration of the VINCI IT Team and Pro-Sapien throughout the project.”

**Richard Smith**  
Group Environmental Manager

## About Pro-Sapien

Pro-Sapien's award-winning software has been advocated by some of the world's largest companies and is deployed globally across each of our clients' hundreds of sites.

With years of invested pragmatic experience in all things Microsoft such as SharePoint and Business Intelligence development, we have become one of the industry's most trusted solution resources for seamless, compatible compliance. Companies spanning the spectrum of business regularly seek us out for our specialist skills in order to ensure compliance, increase visibility across global sites and drive sustainability in business.

If you'd like to find out more about how you can turn your EHS and Quality data into meaningful statistics with Pro-Sapien, here are the next steps you can take:

- **Download** our product features brochure
- **Register** for an upcoming live webinar
